Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 August 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Applicant's election of species (over-etching, linear stepper and probe interface) without traverse of the in the reply filed on August 22, 2005 is acknowledged. Claims 49 and 50 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to nonelected species, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 43-48, 51-59 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The examiner found no disclosure pertaining to the separation distance being adjustable in response to the orientation of two sub-components of one of the micro-components.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 23-48 and 51-59 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 5,806,152 issued to Saitou et al. (hereinafter, Saitou).

Saito teaches fabrication of spaced apart micro-components that are latchable, one to another in such a way as to reduce or eliminate the spacing between the components. The latching mechanism comprises movable arms that have barbed ends which engage with notches in a second micro-component. Saito teaches the micro-components are configured to interface with a probe. Saito teaches an assembly with a plurality of micro-components. Saito teaches one of the micro-components remains attached to a substrate. See: abstract; figure 2; column 2, lines 10-20; column 3, lines 25-35; column 6, lines 33-55; column 8, lines 20-60; column 9, lines 58-61; column 11, lines 45-48; and column 12, lines 20-30.

Claims 22-34, 36-42 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent 6,561,725 issued to Ellis et al.

Ellis et al. substantially disclose the claimed invention (see figures 1-7). The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
